

“EcoDistricts—The Nexus between Green Building and Sustainable Infrastructure,” a panel discussion

with Tom Puttman, P.E., AICP, LEED AP, David Evans and Associates, Inc.

What is an EcoDistrict? According to the Portland Metro EcoDistricts Initiative from the Portland Sustainability Institute, “An EcoDistrict is an integrated and resilient district or neighborhood that is resource efficient; captures, manages, and reuses a majority of energy, water, and waste on site; is home to a range of transportation options; provides a rich diversity of habitat and open space; and enhances community engagement and wellbeing. EcoDistricts deliver the lowest possible environmental impact and highest longterm economic and community returns.”

Good for 2
CPD credits!

In other words, quoting from a November 9, 2009 article by Nathalie Weinstein of the Daily Journal of Commerce, “Eco-districts could be the neighborhoods of the future. These high-performing, green districts would bring together residents, businesses, utilities and other groups to create and manage their own energy and wastewater systems, saving money and creating better places to live and work.”
